Co-Founder & CTO of Curvet, a unified AI workspace where every major model for chat, image, video, voice and 3D sits behind one interface, one API key and one balance. Before that I spent nearly three years at Samsung R&D Institute, rising to Senior Software Engineer on the Next-Gen Connectivity team, after a run of Flutter and full-stack roles at startups.

EXPERIENCE

Co-Founder & CTO, Curvet — 05/2026 – Present · Bengaluru, India

- Built Curvet from zero: one interface, API key and credit balance across 100+ models from 28 providers (OpenAI, Anthropic, Google, Alibaba Qwen, DeepInfra, ElevenLabs, Runway, Kling and more).
- Architected the platform: a React + TypeScript PWA and a Node/Express + MongoDB backend with ~100 API modules, real-time collaboration over Socket.io, Firebase auth and Stripe/Razorpay billing on a credit system.
- Designed "auto" model selection over a scored model registry (quality, strengths, capabilities, live price) with cross-provider fallback chains, so a failing provider degrades to a working answer instead of an error.
- Built a visual workflow builder whose run-time core is one shared module executed by both the browser and a headless server runner, so the two can never drift apart.
- Built an agent runtime with tiered, search-loaded tools and prompt caching, cutting the fixed prompt overhead of a simple request by more than half.

Senior Software Engineer, Samsung R&D Institute — 08/2023 – 05/2026 · Bengaluru, India

- Optimized an on-device network switching algorithm with a deep-learning approach, cutting switching latency by 3x.
- Created internal automation tools that reduced developer workload by 30%, freeing the team for high-impact work.
- Designed scalable cross-device connectivity features for the Galaxy ecosystem, used by 10M+ users.

Technical Lead (Part-time), MyEra — 08/2022 – 10/2022 · Remote

- Built the personalization engine for e-commerce platforms from the ground up, with Django as the ORM-backed API and React on the front end.
- Enabled 10+ client brands to embed the personalization right inside their own web apps via iframes.

Member of Technical Staff (Part-time), Shakespeare AE — 10/2022 – 08/2023 · Delhi, India

- Rebuilt the Flutter app on a custom design system of reusable components, cutting code duplication by 40%.
- Crafted an animation-heavy UI with custom paths and transforms that lifted user retention by 20%.

Core Developer (Intern), Kalpas Innovations — 09/2021 – 01/2022 · New Delhi, India

- Built a Flutter dating app for LetsLiink, an African client, with real-time video calls and geospatial matchmaking.
- Cut crashes by 50% through lazy loading and fixing memory leaks.

Earlier: MAGPIE Intern, Samsung R&D Institute India (05/2022 – 07/2022) · Full Stack Developer, Wyden (07/2022) · Technical Lead, Naxome (01/2022 – 04/2022) · Flutter Developer, Blobdesign (08/2021 – 09/2021) · Flutter Developer, Humming Sparrow Digital Solutions (03/2021 – 05/2021)

PROJECTS

Curvet *React, TypeScript, Node.js, MongoDB, Socket.io, GCP* — curvet.ai

A unified AI workspace and API: chat, image, video, audio and 3D generation across 100+ models, a visual workflow builder, AI agents, real-time collaboration and a marketplace of AI apps. One key, one balance, automatic model selection with cross-provider fallback.

@curvet/sdk + @curvet/cli *TypeScript, Node.js, MCP, npm* — npmjs.com/package/@curvet/sdk

The official TypeScript SDK and CLI for the Curvet API: chat, media generation, workflows, balances and enterprise admin from one client. The CLI also runs as an MCP server over stdio, so Claude, Cursor and other agents can use Curvet as a tool.

cline-testgen *Cline SDK, Ollama, Gemma, Python, Node.js* — github.com/utkarshgupta2504/cline-testgen

Reads a Spring Boot class and its existing tests, works out what isn't covered, and generates the missing JUnit cases, weighted towards negative and edge cases. Runs fully local on Gemma 12B via Ollama, driven by the Cline SDK, with a Python package and a Node CLI/HTTP server.

SKILLS

AI & LLM Engineering: LLM orchestration, Agents & tool use, MCP, Model routing & fallbacks, Prompt caching, Speech (ASR / TTS), OpenAI / Anthropic / Gemini APIs, Ollama

Languages: TypeScript, JavaScript, Python, Dart, Java, C++, SQL

Backend: Node.js, Express, MongoDB, Django, FastAPI, Flask, Socket.io, SSE / streaming

Frontend & Mobile: React, Vite, Tailwind, TanStack Query, three.js, Flutter, React Native, PWA

Cloud & Ops: GCP, AWS, DigitalOcean, Docker, nginx, pm2, OpenTelemetry, Grafana, PostHog, Playwright

EDUCATION

Netaji Subhas University of Technology — 2019 – 2023

B.Tech, Electronics & Communication Engineering, CGPA 8.0

ACHIEVEMENTS

- Smart India Hackathon 2022 finalist, under ISRO's problem statement.
- 12th of 6,700 participants in CodeJitsu, IIT Guwahati.
- Winner of EduThon, IIIT Lucknow's hackathon, against 600+ teams.
- Top 1.7 percentile in JEE Main 2019.
